OKO Finance

Uses satellite to create insurance products for farmers.

OKO secures smallholder farmers' income thanks to an innovative insurance solution. OKO's insurance automatically compensates farmers affected by adverse weather, identified via satellite. OKO brings its insurance services to farmers via mobile, thanks to partnerships with mobile operators. OKO has a double impact, improving both financial inclusion and resilience to climate change. OKO operates currently in Mali and Uganda, securing 2,000 farmers so far.

Avenews-GT

Provides web platform for commercial trade of agricultural produce

Avenews creates the connection between financial institutions and agribusinesses through the Avenews agri-business management platform that directly links agri-trade activity with financial services. The platform operates as a digital infrastructure that enables financial institutions to access agri-business data that previously was out of reach, reduce risk, and distribute financial services to agricultural businesses across the supply chain.

Paygilant

Provides Frictionless Mobile Payments Fraud Prevention

Paygilant is a revolutionary frictionless digital banking and payments anti-fraud company, designed for the new Fintech era. Paygilant's innovative approach eliminates the trade-off between fraud prevention, frictionless authentication and user's privacy, delivered with outstanding simplicity.

Paygilant enables financial organizations to boost their revenue, by enhancing the user experience and preventing fraud before the transaction occurs. Its easy-to-integrate patented technology, utilizes six proprietary Intelligence Sets, which work in harmony to deliver value from day-one. Paygilant's unique fraud methodology consists of multiple intelligence sets including: App Insights, Behavioral Biometrics, Activity Map, User Space, Device DNA and Transaction View.

PayKey

Puts banks where their customers are - on social networks

PayKey redefines the mobile banking and payments experience by giving customers instant access to financial services through the keyboard in any mobile app. With PayKey's keyboard solution banks and financial institutions can embed financial services in customers' everyday mobile interactions, enabling easy access to a range of services like peer-to-peer (P2P) payments, cardless cash withdrawals, mobile top-ups, loan requests, and more, all from the mobile keyboard. The company's patented solution combines a state-of-the-art, full-featured mobile keyboard with carefully designed banking flows to cater a frictionless mobile banking experience in any app including WhatsApp, Facebook Messenger, Instagram, among others.

Tarya Fintech

Financial platform that adds value throughout the business's distribution chain

Tarya is reshaping banking by providing a truly unique, digital financial platform consisting of one core technology with multiple applications, adding value throughout the business's distribution chain and creating a ripple effect, which generates growth, loops for its business partners, its customers and the business itself. Tarya's unique, innovative, all-in-one, scalable financial services platform enables any retailer to become a financial provider. Based on cutting-edge technologies, modular products, flexible services and a variety of business models, Tarya can operate as a service in cloud-based and hybrid environments.

Worthy.Credit

Uses psychometrics to assess creditworthiness based on personal character

Innovative Assessments assesses creditworthiness based on a borrower's personal character. Our mission is to facilitate financial inclusion, and help more good people qualify for the affordable credit they deserve. Our flagship product, Worthy Credit, is a brief online psychometric questionnaire that measures key competencies that are necessary for good borrower's behaviors. Worthy Credit complements traditional credit scores and seamlessly integrates with any lending platform, allowing lenders to approve more loans among the underbanked without taking additional risks.

INVIUO

A blockchain-based platform for invoice and credit finance to SMEs

INVIUO is a platform for registry networks that enables partners, affiliates and competitors to collaborate in order to diminish fraud and friction to provide a healthy ecosystem for all stakeholders. INVIUO's platform is open to any authorized financial services company or platform that wishes to gain access to one of INVIUO's networks. INVIUO's technology enables network members to authenticate, cross-check and detect suspected copies of confidential records without the need to expose the actual record. The network serves as a single source of truth for private and sensitive information, preventing various types of fraudulent activities that exploit the existing information asymmetry as well as reduce friction and costs to all participants.

Verifyoo

Verifies user's identity through active behavioural biometrics

Verifyoo's technology is based on active behavioral biometrics, which analyses the users' handwritten script on the touch screen of any mobile device in a few seconds and verifies the user's identity. This innovative mobile based solution provides a simultaneous two-factor authentication: What you have, and Who you are. The solution provides a scalable security according to the level of security needed; nothing to memorize; device agnostic, doesn't use private data (no physiological body parts used, so it can be stored on server or cloud and is revocable, in case of a breach). The initial registration process takes about 30 seconds, and after that about 4 seconds for the authentication session, which strengthens with each session.
